btv **vault**

Maximum safety and reliability:

Our highly flexible security system for all common programming devices is the *btv vault*-technology. With this technology we meet the highest demands:

Data security is ensured throughout the entire programming process.

fig.1: *btv vault* file server

Your advantages at a glance:

Automated data security

btv vault secures and protects your data throughout the entire programming process.
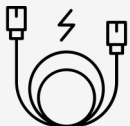

Key management

Your keys, your data!
Secure Automated Programming by *btv technologies* ensures the secure handling of asymmetric keys.

Future proof PGP encryption

We use a future proof encryption with 4096 bit key depth.

Power off security

Handling of encrypted data only in RAM: It is almost impossible for third parties to access the data.
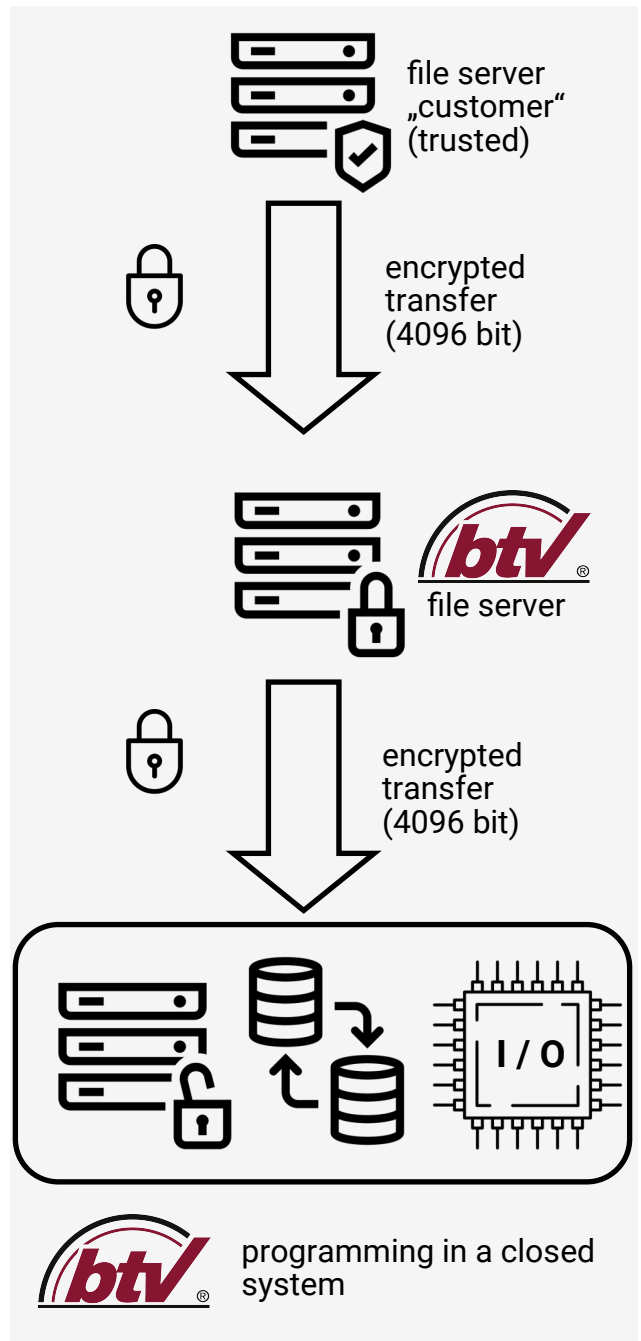

Physically closed system

The *btv vault* is physically secure, equipped with robust hardware and protected against unauthorised access from third parties

Flexible and cost-saving

Secure Automated Programming with *btv vault* is used on all programming machines at **btv technologies**.
